

The Scanwill MP Hydraulic Pressure Intensifiers in Mining applications

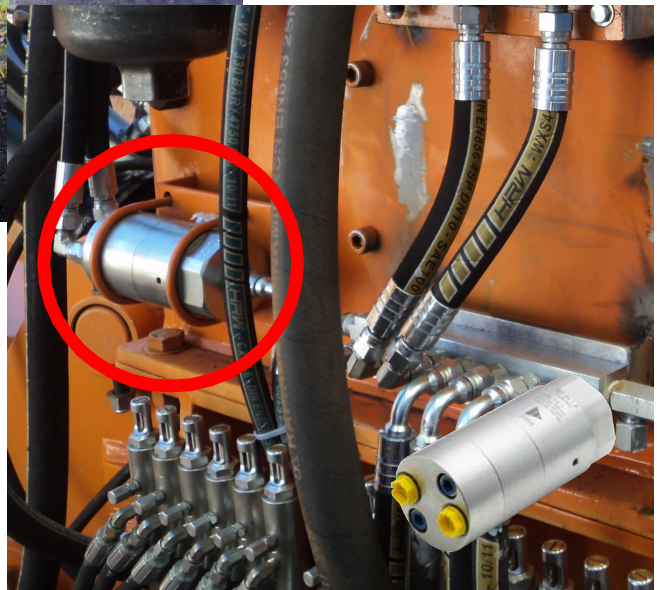

More Pressure. More Power

The Scanwill MP- intensifiers are used to increase the pressure from 100 - 200 bar to end pressures in the range 350 - 800 bar for brake systems and for support cylinders.

The MP- intensifier (cetop / NG6) for braking circuits

The MP-M intensifier (in-line) for support cylinders

More information on www.scanwill.com

The Scanwill Pressure Intensifiers allow to keep the energy consumption low, contributing to reach goal no. 12 in the world sustainability target.
